

THERMAL ENGINEERING VOL. I

[THERMODYNAMICS AND HEAT ENGINES]

~~~~~ ❁ ~~~~~  
By  
Dr. S. S. Khandare

**Edition** : 2<sup>nd</sup> Edition : 2023  
**ISBN** : 9789385039669  
**Binding** : Paperback  
**Pages** : 928 + 16 = 944  
**Size (mm)** : 235 x 35 x 170  
**Weight** : 1255 g

₹ 600.00 **BUY**

## ABOUT THE BOOK

This text-book along with its companion volume II is designed to cover the entire syllabi of the subject of Thermal Engineering, which is inherent in the study of engineering students.

The entire matter of the book is most comprehensive and presented in lucid language, with number of solved examples, neatly drawn sketches, so that the reader can understand the fundamentals of the subject easily. Number of exercises are given at end of appropriate sections as well as at the end of chapters. Exercises, subjective questions, objective type multiple choice questions are also included at the end of chapters.

*The book has Sixteen chapters. The key feature of the book are:*

- Chapter 1 and 2 deals with Applied Thermodynamics
- Chapter 3 deals with Steam and Steam Cycles
- Chapter 4 to 6 contains Boilers
- Chapter 7 and 8 deals with Fuel and Draught
- Chapter 9 consist of the study of Steam Engine and Testing
- Chapter 10 and 11 deals with Steam Nozzle and Turbine
- Chapter 12 discussing topic on Condenser
- Chapter 13 and 14 contains topics on I. C. Engines Theory and Testing
- Chapter 15 Gas Turbine
- Chapter 16 Air Pollution and Control.

*The book within its 928 pages it comprise the following*

- \* 546 Self-illustrative neatly drawn sketches
- \* 43 Useful tables
- \* 293 Solved Examples
- \* 500 Objective Type Multiple Choice Questions
- \* 905 Exercises and Subjective Questions

It is hoped that this book will satisfy the need of the Mechanical Engineering students preparing for the B.Tech/B.E. examinations of almost all the Indian Universities, Diploma examinations conducted by various Boards of Technical Education, Certificate courses as well as for the A.M.I.E., U.P.S.C., G.A.T.E. and other similar competitive and professional Examinations. It should also be of an immense help to the practising Engineers.

## CONTENT

- 1 : INTRODUCTION
- 2 : THERMODYNAMIC PROCESSES AND CYCLES
- 3 : PROPERTIES OF STEAM AND STEAM CYCLE
- 4 : STEAM BOILERS
- 5 : BOILER MOUNTINGS AND ACCESSORIES
- 6 : TESTING AND PERFORMANCE OF BOILER
- 7 : DRAUGHT
- 8 : FUELS AND COMBUSTION
- 9 : STEAM ENGINE AND TESTING
- 10 : STEAM NOZZLE
- 11 : STEAM TURBINE
- 12 : CONDENSER
- 13 : INTERNAL COMBUSTION ENGINE
- 14 : TESTING OF INTERNAL COMBUSTION ENGINE
- 15 : GAS TURBINE
- 16 : AIR POLLUTION AND CONTROL
- APPENDIX A : SHORT QUESTIONS FOR VIVA-VOCE
- APPENDIX B : STEAM TABLES WITH MOLLIER DIAGRAM
- INDEX

**Catalogue Checklist**

**THERMAL ENGINEERING VOL. I**  
**DETAILED CONTENTS**

**Chapter 1 INTRODUCTION**

- 1-1. Thermal engineering
  - 1-2. Areas of thermal engineering
    - 1-2-1. Heat engines
    - 1-2-2. Energy sources
    - 1-2-3. Refrigeration and air-conditioning
    - 1-2-4. Heat and mass transfer
    - 1-2-5. Fuel and combustion system
    - 1-2-6. Compressor and blowers
    - 1-2-7. Cryogenics
    - 1-2-8. Jet Propulsion
  - 1-3. Engineering thermodynamics
  - 1-4. Working fluids and thermodynamic system
  - 1-5. Thermodynamic state and thermodynamic process
  - 1-6. System of units
  - 1-7. Units of length, area and volume
  - 1-8. Specific volume
  - 1-9. Units of mass
  - 1-10. Units of force
  - 1-11. Units of work and power
  - 1-12. Units of energy
  - 1-13. Measurements of properties of fluid
    - 1-13-1. Pressure
    - 1-13-2. Temperature
  - 1-14. Zeroth law of thermodynamics
  - 1-15. Temperature measurement
  - 1-16. Pyrometers
    - 1-16-1. Thermo-electric pyrometer
    - 1-16-2. Radiation pyrometer
    - 1-16-3. Optical pyrometer
    - 1-16-4. Pyrometric cone or Seger cone pyrometer
  - 1-17. Absolute temperature scale and absolute zero
  - 1-18. NTP (normal temperature pressure) and STP (standard temperature pressure) conditions
  - 1-19. Volume
  - 1-20. Work
  - 1-21. Heat
  - 1-22. Properties of substances
- Objective questions

**Chapter 2 THERMODYNAMIC PROCESSES AND CYCLES**

- 2-1. Perfect gas
- 2-2. Vapour
- 2-3. Boyle's law
- 2-4. Charles' law
- 2-5. Combination of laws of Boyle and Charles
- 2-6. Vander-Waal's equation
- 2-7. Units of R
- 2-8. Universal gas constant
- 2-9. Avogadro's law
- 2-10. Enthalpy
- 2-11. Entropy
- 2-12. Intensive and extensive properties
- 2-13. Thermodynamic system
- 2-14. Law of conservation of energy
- 2-15. First law of thermodynamics
- 2-16. Concepts of the second law of thermodynamics
  - 2-16-1. Kelvin-Planck statement
  - 2-16-2. Clausius statement
- 2-17. Specific heats of a gas
- 2-18. Ratio of specific heats
- 2-19. Relation between the two specific heats of a gas and the specific gas constant
- 2-20. Expansion and compression of gases
- 2-21. Point and path functions
- 2-22. Process
- 2-23. Constant volume process

- 2-24. Constant pressure process
- 2-25. Isothermal process
- 2-26. Isentropic process
- 2-27. Polytropic process
- 2-28. Determination of the index of expansion or compression
- 2-29. Comparison of work done by a gas during expansion for various processes
- 2-30. Mean effective pressure
- 2-31. Summary of equations for gas processes
- 2-32. Other important processes
  - 2-32-1. Hyperbolic expansion
  - 2-32-2. Free expansion
  - 2-32-3. Throttling process
- 2-33. Gas tables
- 2-34. Approximation for heat absorbed
- 2-35. Typical examples
- 2-36. Reversibility
- 2-37. Air standard cycles
- 2-38. Heat machine
- 2-39. Useful work
- 2-40. Efficiency of cycle
- 2-41. Air standard efficiency of cycle
- 2-42. Assumptions in thermodynamic cycles
- 2-43. Thermodynamic cycles
  - 2-44. Carnot cycle
  - 2-45. Otto cycle
  - 2-46. Mean effective pressure
  - 2-47. Diesel cycle
  - 2-48. Dual combustion cycle
  - 2-49. Stirling cycle
  - 2-50. Ericsson cycle
  - 2-51. Brayton cycle
- 2-52. Comparison of ideal cycles
- 2-53. Reversed Brayton cycle (Bell-Coleman cycle)
- 2-54. Coefficient of performance (COP) flow processes
  - Flow processes
  - Flow processes
- 2-55. Steady flow energy equation
- 2-56. Control volume and flow work
- 2-57. Flow work of steady flow system
- 2-58. Applications of steady-flow energy equation
- 2-59. Objective questions

**Chapter 3 PROPERTIES OF STEAM AND STEAM CYCLE**  
**PROPERTIES OF STEAM**

- 3-1. Vapour and steam
- 3-2. Conservation of form
- 3-3. Phase diagram
- 3-4. Effect of pressure on the boiling point of water
- 3-5. Temperature-pressure curve for steam
- 3-6. Generation of one kg of steam at a given pressure from water initially at 0°C
- 3-7. Conditions of steam
- 3-8. Saturated steam
- 3-9. Dry saturated steam and wet steam
- 3-10. Superheated steam
- 3-11. Supersaturated steam
- 3-12. Properties of steam
- 3-13. Dryness fraction of saturated steam
- 3-14. Use of steam tables
- 3-15. Sensible heat
- 3-16. Latent heat of vaporization
- 3-17. Enthalpy of wet steam
- 3-18. Enthalpy of superheated steam
- 3-19. Specific volume of steam
- 3-20. Internal energy of steam
- 3-21. Entropy of vapours

**THERMAL ENGINEERING VOL. I**  
**DETAILED CONTENTS**

- 3-22. Temperature–entropy diagram
- 3-23. Heat entropy chart (Mollier chart)
- 3-24. Pressure-Enthalpy chart
- 3-25. Heating and expansion of vapours
- 3-26. Methods of determination of dryness fraction of steam
- 3-27. Bucket calorimeter
- 3-28. Separating calorimeter
- 3-29. Throttling calorimeter
- 3-30. Combined separating and throttling calorimeter
- 3-31. Typical Examples  
STEAM CYCLE
- 3-32. Steam cycle
- 3-33. Carnot cycle
- 3-34. Rankine cycle
- 3-35. Comparison of Rankine and Carnot cycles on temperature entropy diagram
- 3-36. Work done during Rankine cycle on pressure-volume diagram
- 3-37. Modified Rankine cycle  
Objective questions

**Chapter 4 STEAM BOILERS**

- 4-1. Functions of boiler
- 4-2. Classification of boilers
- 4-3. Terms commonly employed in connection with boilers
- 4-4. Lancashire boiler  
Construction of Lancashire boilers
- 4-5. Cornish boiler
- 4-6. Multi-tubular fire tube boilers
- 4-7. Horizontal return tubular boilers
- 4-8. Locomotive boiler
- 4-9. Vertical boilers
- 4-10. Cochran boiler  
Construction of Cochran boiler
- 4-11. Scotch Marine fire-tube boiler  
Construction of Scotch Marine fire-tube boiler
- 4-12. Water tube boilers
- 4-13. Babcock and Wilcox water tube boiler
- 4-13-1. Construction of Babcock and Wilcox type boiler
- 4-13-2. Settings for the Babcock and Wilcox boiler
- 4-14. Stirling boiler (Bent tube type water tube boiler)
- 4-15. Integral furnace boiler
- 4-16. Waste heat boilers
- 4-17. Super critical boilers
- 4-18. Boiler specifications
- 4-19. Fluidized bed combustions boilers (FBC)
- 4-19-1. Pulverized coal firing system
- 4-19-2. Pulverized fuel
- 4-19-3. Advantages of pulverized fuels
- 4-19-4. Disadvantages of stoker firing system
- 4-19-5. Fluidized bed combustion
- 4-19-6. Advantages of FBC boilers
- 4-19-7. Classification of fluidized bed combustion (FBC) boilers
- 4-20. Thermal efficiency of FBC boiler
- 4-20-1. Unburnt fuel in flue gases
- 4-20-2. Sensible heat in flue gases
- 4-20-3. Surface radiation losses
- 4-21. Pulverized fuel handling systems
- 4-21-1. Unit system
- 4-21-2. Central or bin system
- 4-22. Pulverized fuel burners
- 4-22-1. Long flame or U-flame or streamlined burners
- 4-22-2. Short flame or turbulent burner
- 4-22-3. Tangential burners
- 4-23. Modern boilers
- 4-23-1. La Mont boiler
- 4-23-2. Benson boiler
- 4-23-3. Loeffler boiler

- 4-23-4. Schmidt-Hartmann boiler
- 4-23-5. Velox boiler
- 4-24. Advantages of high pressure boilers  
Objective questions

**Chapter 5 BOILER MOUNTINGS AND ACCESSORIES**

- 5-1. Boiler mountings
- 5-2. Safety valves
- 5-2-1. Dead weight safety valve
- 5-2-2. Spring loaded safety valve
- 5-2-3. Lever loaded safety valve
- 5-2-4. High steam and low water safety valve
- 5-3. Water level indicators
- 5-4. Pressure gauge
- 5-5. Attachment for inspector's test gauge
- 5-6. Steam stop valve
- 5-7. Feed check valve
- 5-8. Blow-off cock
- 5-9. Manhole
- 5-10. Fusible plug
- 5-11. Boiler accessories
- 5-12. Economizers
- 5-13. Air pre-heaters
- 5-14. Superheaters
- 5-14-1. Methods of superheating steam
- 5-14-2. Methods of control of superheat
- 5-14-3. Smooth tube hairpin type superheater
- 5-14-4. Multiple loop superheaters
- 5-15. Feed pumps
- 5-15-1. Duplex feed pump
- 5-16. Steam drier or separator
- 5-17. Steam trap
- 5-17-1. Expansion trap
- 5-17-2. Bucket or float steam trap
- 5-18. Injectors
- 5-19. Pressure reducing valve  
Objective questions

**Chapter 6 TESTING AND PERFORMANCE OF BOILER**

- 6-1. Feed water
- 6-2. Steam
- 6-3. Fuel
- 6-4. Duration of boiler test
- 6-5. Flue gas sampling
- 6-6. Flue gas temperature measurement
- 6-7. Air
- 6-8. Draught
- 6-9. External heat losses from boiler and brick work
- 6-10. Auxiliary Plant
- 6-11. Air Infiltration and by-passing
- 6-12. Performance test
- 6-13. Thermal efficiency of boiler
- 6-14. Evaporation
- 6-15. Evaporation ratio
- 6-16. Boiler performance
- 6-17. Equivalent evaporation
- 6-18. Reference standards
- 6-19. Direct method of testing
- 6-20. Indirect method of testing
- 6-21. Measurements required for direct method of testing
- 6-22. Boiler efficiency
- 6-23. Indirect method of testing
- 6-24. Measurement of parameters
- 6-25. Calculation of boiler efficiency by indirect method
- 6-26. Heat losses in boiler
- 6-27. Boiler heat balance
- 6-28. Boiler trial

**THERMAL ENGINEERING VOL. I**  
**DETAILED CONTENTS**

- 6-28-1. Objective of a boiler trial
- 6-28-2. Plant
- 6-28-3. Report sheet on boiler trial
- 6-28-4. Specimen set of calculations
- 6-28-5. Graphical representation of results
- 6-28-6. Conclusions and criticisms
- 6-29. Boiler house instruments
- 6-30. Boiler house records  
Economic analysis
- 6-31. Typical examples  
Objective questions

**Chapter 7 DRAUGHT**

- 7-1. Definition of draught
- 7-2. Classification of draught
- 7-3. Functions of a chimney
- 7-4. Natural draught
- 7-5. Determination of a height of a chimney to produce a given total static draught
- 7-6. Condition for maximum discharge through a chimney
- 7-7. Efficiency of a chimney
- 7-8. Draught losses
- 7-9. Artificial draught
- 7-10. Mechanical draught
- 7-11. Induced draught
- 7-12. Forced draught
- 7-13. Balanced draught
- 7-14. Power required to drive a fan
- 7-14-1. Power required for forced draught fan
- 7-14-2. Power required for an induced draught fan
- 7-15. Steam jet draught
- 7-16. Draught gauges  
Objective questions

**Chapter 8 FUELS AND COMBUSTION**

- FUELS**
- 8-1. Classification of fuels
  - 8-2. Solid fuels
  - 8-3. Liquid fuels
  - 8-4. Hydrocarbons
  - 8-5. Gaseous fuels
  - 8-6. Calorific value of fuels
  - 8-7. Theoretical determination of calorific value of fuel
  - 8-8. Calorific value of gaseous fuels
  - 8-9. Experimental determination of calorific value of a fuel
  - 8-10. Bomb calorimeter
  - 8-11. Calorific value of liquid fuels
  - 8-12. Calorific value of gaseous fuels
  - 8-13. Gas calorimeters
  - 8-13-1. Boy's gas calorimeter
  - 8-13-2. Junker's gas calorimeter
  - 8-14. Alternative fuels
- COMBUSTION**
- 8-15. Combustion of a fuel
  - 8-15-1. Combustion of carbon
  - 8-15-2. Combustion of carbon monoxide
  - 8-15-3. Combustion of hydrogen
  - 8-15-4. Combustion of sulphur
  - 8-16. Stoichiometric air-fuel ratio
  - 8-17. Excess air
  - 8-18. Determination of the flue gas analysis by mass and by volume
  - 8-19. Determination of air supplied from volumetric analysis of flue gases
  - 8-20. Determination of air leakage in boiler flues
  - 8-21. Determination of the quantity of air supplied per kg of fuel from the analysis of flue gases when given by mass
  - 8-22. Chemically correct air fuel ratio
  - 8-22-1. Combustion of hydrogen

- 8-22-2. Combustion of carbon monoxide
- 8-22-3. Combustion of marsh gas
- 8-22-4. Excess air coefficient
- 8-23. Determination of flue gas analysis by volume and by mass in case of gaseous fuel
- 8-24. Determination of quantity of air supplied per m<sup>3</sup> of gas from dry flue gas analysis in case of gaseous fuels
- 8-25. Calculation of heat losses
- 8-26. Exhaust gas analysis
- 8-26-1. Conventional method
- 8-26-2. Modern methods
- 8-27. Determination of air-fuel ratio with the help of dry flue gas analysis  
Objective questions

**Chapter 9 STEAM ENGINE AND TESTING**

- 9-1. Introduction
- 9-2. Classification
- 9-3. Parts of a simple steam engine
- 9-4. Function of steam engine parts
- 9-5. Terms connected with steam engines
- 9-6. Working of a steam engine
- 9-7. Hypothetical indicator diagram
- 9-8. Construction of hypothetical indicator diagram
- 9-9. Determination of mean effective pressure
- 9-10. Work done in a steam engine cylinder during in hypothetical cycle
- 9-11. Actual indicator diagram and diagram factor
- 9-12. Determination of "theoretical indicated power"
- 9-13. Indicator
- 9-14. Steam consumption
- 9-15. Missing quantity
- 9-15-1. Causes of missing quantity
- 9-15-2. Means of reducing cylinder condensation
- 9-16. Efficiencies
- 9-17. Steam engine governors
- 9-18. Flywheel
- 9-19. Compound steam engines
- 9-20. Advantages of compounding of steam engine
- 9-21. Classification of compound engines
- 9-22. Terms used in connection with compound engines
- 9-23. Mean effective pressure referred to the L.P. cylinder
- 9-24. Estimation of cylinder dimensions (two cylinder compound engine)
- 9-25. Triple and quadruple expansion engines
- 9-26. Governing of compound engines
- 9-27. Uniflow engines
- 9-28. Purpose of engine trials
- 9-29. Trial procedure
- 9-30. The brake power and its measurements
- 9-30-1. Brake power
- 9-30-2. Measurement of brake power
- 9-31. Mechanical efficiency
- 9-32. Report on simple steam engine trial  
Objective questions

**Chapter 10 STEAM NOZZLE**

- 10-1. Introduction
- 10-2. Types of nozzles
- 10-3. Mass flow rate
- 10-4. Flow of wet steam
- 10-5. Flow through steam nozzles
- 10-6. Velocity of steam leaving nozzle
- 10-7. Effect of friction in nozzle
- 10-8. Friction loss
- 10-9. Mass of steam discharged
- 10-10. Critical pressure ratio
- 10-11. Design of nozzle

**THERMAL ENGINEERING VOL. I**  
**DETAILED CONTENTS**

- 10-12. Length of nozzle
- 10-13. Velocity coefficient
- 10-14. Sub-sonic and super-sonic flow
- 10-15. Supersaturated or metastable expansion of steam in the nozzle
- 10-16. Wilson line
- 10-17. Steam injector
- Objective questions

**Chapter 11 STEAM TURBINE**

- SIMPLE STEAM TURBINE
- 11-1. Introduction
- 11-2. Types of steam turbines
- 11-3. Classification of steam turbine
- 11-4. Impulse turbine
- 11-4-1. Velocity diagram of steam turbine
- 11-4-2. Forces on the blade and work done
- 11-5. Effect of blade friction on velocity diagram
- 11-6. Blade speed ratio
- 11-7. Single stage impulse turbine maximum efficiency relation
- 11-8. Simple de-laval turbine
- MULTI-STAGE STEAM TURBINE
- 11-9. Methods of reducing rotor speed or compounding of stages
- 11-9-1. Velocity-compounded impulse turbine
- 11-9-2. Efficiency of a velocity-compounded turbine
- 11-9-3. Velocity diagram for axial discharge
- 11-10. Pressure-compounded impulse turbine
- 11-11. Pressure-velocity compounded impulse turbine
- 11-12. Parson's reaction turbine
- 11-13. Velocity diagram for reaction turbine
- 11-14. Degree of reaction
- 11-15. Condition for maximum efficiency
- 11-16. Height of blades for reaction turbine
- 11-17. Re-heat factor
- 11-18. Re-heating process
- 11-18-1. Advantages of re-heating
- 11-19. Regenerative feed heating or bleeding process
- 11-20. Steam turbine governing
- 11-20-1. Throttle governing
- 11-20-2. Nozzle control governing
- 11-20-3. By-pass governing
- 11-21. Erosion of turbine blades
- 11-22. Advantages of steam turbine over gas turbine
- Objective questions

**Chapter 12 CONDENSER**

- 12-1. Function of condenser
- 12-2. Type of condensers
- 12-3. Jet condensers
- 12-4. Surface condenser
- 12-5. Central flow type condenser
- 12-6. Evaporative condenser
- 12-7. Reasons for inefficiency in surface condenser
- 12-8. Air leakage in condenser
- 12-9. Vacuum
- 12-10. Effect of air in a condenser
- 12-11. Methods for obtaining maximum vacuum in condenser
- 12-12. Vacuum efficiency
- 12-13. Coefficient of performance or efficiency of surface condenser
- 12-14. Determination of circulating water required in condenser
- 12-15. Heat transmission in tubes
- 12-16. Cooling towers
- 12-17. Condenser efficiency
- 12-18. Air pump
- 12-18-1. Types of pump
- 12-19. Steam jet air ejector
- 12-20. Modern air ejector plant
- 12-21. Exhaust connections
- Objective questions

**Chapter 13 INTERNAL COMBUSTION ENGINE**

- 13-1. Introduction
- 13-2. Applications
- 13-3. Basic operation of I.C. engine
- 13-4. Classification of I.C. engines
- 13-5. Terms connected with I.C. Engine
- 13-7. Construction of I.C. engines
- 13-8. I.C. engine cycles
- 13-9. Four stroke cycle engine principle
- 13-10. Valve-timing diagram
- 13-11. Two stroke cycle engine
- 13-11-1. Port type engine
- 13-11-2. Reed valve
- 13-12. Comparison of two stroke cycle and four stroke cycle engines
- 13-13. Compression ignition engines
- 13-14. Fuel pump and injector
- 13-15. Combustion chambers
- 13-16. Spark ignition engines
- 13-17. Carburettor
- 13-17-1. Fuel pump for petrol engine
- 13-18. Ignition system
- 13-19. Spark plug
- 13-20. Ignition advance mechanism
- 13-21. Magneto ignition system
- 13-22. Electronic ignition system
- 13-23. Capacitor discharge system
- 13-24. Advantages of breakerless electronic ignition system
- 13-25. Electronic fuel Injection system for petrol engines
- 13-26. Advantages and disadvantages of C.I. engine over S.I. engine
- 13-27. Comparison of S.I. and C.I. engine
- 13-28. Lubrication in I.C. engine
- 13-29. Coefficient of friction
- 13-30. Viscosity
- 13-31. Properties of a lubricant
- 13-32. Tests of lubricants
- 13-33. Mechanical testing of a lubricant
- 13-34. Thurston oil testing machine
- 13-35. Methods of lubrication
- 13-36. Oil filter
- 13-37. Lubrication of an I.C. engine
- 13-38. Closed crankcase engines
- 13-39. Lubrication of the horizontal engines
- 13-40. Types of lubrication system
- 13-41. Wet sump lubrication system
- 13-41-1. Splash system
- 13-41-2. Semi-pressurised system
- 13-41-3. Pressurised lubrication system
- 13-42. Dry sump lubrication system
- 13-43. Mist lubrication system
- 13-44. Cooling system
- 13-45. Air cooling system
- 13-46. Water cooling system
- 13-47. Combustion in SI and C.I. engine
- 13-48. Normal combustion in S.I. engine
- 13-49. Abnormal combustion in S.I. engine
- 13-49-1. Pre-ignition
- 13-49-2. Detonation or knocking
- 13-50. Factor affective detonation or knocking
- 13-51. Highest useful compression ratio (HUCR)
- 13-52. Octane number
- 13-53. Performance number
- 13-54. Normal combustion in C.I. engine
- 13-55. Abnormal combustion in C.I. engine
- 13-56. Factor affecting combustion in C.I. engine
- 13-57. Centane number
- 13-58. Scavenging
- 13-59. Supercharging of I.C. engines

- 13-60. Firing order of the engine
- 13-61. Methods of starting I.C. engines
- 13-62. Gas engines
- 13-63. Dual-fuel engines
- 13-64. Governing of I.C. engines
- 13-65. Gas producer

Objective questions

#### Chapter 14 TESTING OF INTERNAL COMBUSTION ENGINE

- 14-1. Introduction
- 14-2. Testing of constant speed internal combustion engines according to Indian standard
- 14-3. Performance test according to Indian standard
  - Power testing
  - Speed testing
  - Frictional power
  - Fuel consumption
- 14-4. Measurement of speed
- 14-5. Measurement of power
- 14-6. Indicated power
- 14-7. Brake power
- 14-8. Types of dynamometer
- 14-9. Mechanical efficiency
- 14-10. Measurement of air consumption
- 14-11-1. Viscous air flow meter
- 14-11-2. Air box meter
- 14-12. Volumetric efficiency
- 14-13. Fuel consumption
- 14-14. Specific fuel consumption
- 14-15. Thermal efficiency
  - 14-15-1. Indicated thermal efficiency
  - 14-15-2. Brake thermal efficiency
- 14-16. Effect of parameter on efficiency
- 14-17. Effect of various parameters on thermal efficiency
- 14-18. Effect of parameters on volumetric efficiency
- 14-19. Testing of engine
- 14-20. Specimen set of calculations for test
- 14-21. Graphical representation of results
- 14-22. Conclusions and criticisms
- 14-23. Exhaust gas calorimeter
- 14-24. Engine performance curves

#### Chapter 15 GAS TURBINE

- 15-1. Introduction
- 15-2. Advantages of gas turbines over reciprocating Internal combustion engines
- 15-3. Advantages of gas turbine over steam turbine
- 15-4. Applications of gas turbines
- 15-5. Types of gas turbines
  - 15-5-1. Constant volume or explosion type
  - 15-5-2. Constant pressure or continuous combustion type turbine
- 15-6. Fuel in gas turbines
- 15-7. Air standard cycle for gas turbine
- 15-8. Work ratio
- 15-9. Classification of gas turbine cycles
  - 15-9-1. Open cycle
  - 15-9-2. Closed cycle gas turbine
- 15-10. Working medium
- 15-11. Advantages of closed cycle gas turbines
- 15-12. Effect of friction or actual process
- 15-13. Types of compressors

- 15-14. Use of heat exchanger
- 15-15. Effectiveness of heat exchanger
- 15-16. Intercooling and reheating
- 15-17. Representation of various gas turbine cycles on T-f diagram
- 15-18. Pressure losses in the system
- 15-19. Semiclosed cycle gas turbine
- 15-20. Turbo-charging
- 15-21. Combined cycle power plant
- 15-22. Co-generation
  - 15-22-1. Topping cycle
  - 15-22-2. Bottoming cycle
- 15-23. Erosion in gas turbine

#### Chapter 16 AIR POLLUTION AND CONTROL

- 16-1. Introduction
- 16-2. Automotive air pollution
- 16-3. Climatic effect
- 16-4. Types of air pollution
- 16-5. Sources of automotive air pollution
- 16-6. Harmful constituents of exhaust gas
- 16-7. Public health risk
- 16-8. Study of emissions
  - 16-8-1. Causes and process of formation of pollutants
  - 16-8-2. Unburned hydrocarbon
  - 16-8-3. Nitrogen oxide
  - 16-8-4. Carbon mono-oxide
  - 16-8-5. Engine particulate emissions
  - 16-8-6. Lead compounds
- 16-9. Laws of automotive air pollution
- 16-10. Emission control techniques
- 16-11. Engine design modification
- 16-12. Using external devices
- 16-13. Water injection system
- 16-14. Air injection system
- 16-15. Thermal reactor
- 16-16. Ammonia injection
- 16-17. Exhaust gas recirculator (EGR)
- 16-18. Catalytic convertor system
- 16-19. Pollution control in thermal power stations
- 16-20. Dust collection and its disposal
- 16-21. Type of gas cleaning devices
- 16-22. Gravitational separators
- 16-23. Centrifugal separator
- 16-24. Inertia type
  - 16-25. Scrubbing dust collector
  - 16-26. Filter type dust separator
  - 16-27. Electrostatic precipitator
  - 16-28. Ash handling system
  - 16-29. Hydraulic ash handling system
    - 16-29-1. Low velocity system
    - 16-29-2. High velocity system
  - 16-30. Pneumatic ash handling system
  - 16-31. Steam jet system
  - 16-32. Ash disposal and their uses
  - 16-33. Combustion control
